

Research: Benefit of rhizophagus intraradices in drought conditions

Increasing drought, under current climate change scenarios, will reduce the sustainability of tomato cultivation in the Mediterranean region. A new study evaluates the effect of Rhizophagus intraradices inoculation on tomato plant physiology and yield in response to progressive water deficit conditions.

New natural coatings from tomatoes improve the preservation of meat

A team of CSIC researchers has achieved gelatin coatings that would delay the oxidation process of the product during storage. The stability of the compounds opens up avenues of research into their possible antioxidant effect after digestion.
