Italy: Emilia-Romagna strives to save water

Tests carried out by the CER (Canal Emiliano Romagnolo) as part of the "Positive" project show that it is possible to save up to 200 cubic meters (m³) of water per hectare per year.

Climate: will gene editing help cope with the changes?

As global temperatures increase and extreme weather events become more common, can gene editing help to tweak our food plants so they can cope with the changes?
